DETAILED ACTION

Receipt is acknowledged of the amendment, on 5/20/2005, which has been entered in the file. Claims 1-6 are pending.

Allowable Subject Matter

1. Claims 1-6 have been allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance: The prior art of record, taken alone or in combination, fails to teach or fairly suggest: a 7-in-1 card reader for a PCMCIA interface including a first connector module provided in a rear end of the cartridge having a plurality of insertion slots for memory cards of specifications including those of CF, MD, MMC, MS and SD, and a second connector module provided on said rear end of said cartridge having an insertion slot for memory cards of specifications including those of SM and XD; in combination with the other claimed limitations as set forth in the claims.

Applicant's argument that Le et al (US 6,738,259 B2) only teaches a single slot, even though it is dimensioned to accommodate various memory cards (see pages 12-13, of the amendment filed on 5/20/2005), has been fully considered and is persuasive.

Jones et al (US 6,438,638 B1) teaches a card reader (42) having a plurality of connectors (62, 64, 66 and 68, see figure 6 and column 8, lines 24-35). However, this appears to suggest a "connector module" for each of the connectors. Thus, Jones et al does not specifically teach or suggest a first connector module having a plurality of insertion slots for memory cards of specifications including those of CF, MD, MMC, MS

and SD, and a second connector module having an insertion slot for memory cards of specifications including those of SM and XD.

Thus, while Le et al, Jones et al and the other prior art of record teach card readers for memory cards of different specifications, the prior art of record fails to teach or suggest the specifically claimed structure of a card reader having the first and second connector modules, as recited in claim 1. Furthermore, without the benefit of applicant's teachings, there is no motivation for one of ordinary skill in the prior art at the time of the invention to combine or modify the prior art of record to provide a card reader having a first connector module (for example, connector 22, shown in figure 2) including insertion slots for memory card specifications of CF, MD, MMC, MS and SD and a second connector module (for example, connector 23, shown in figure 2) including an insertion slot for memory cards specifications of SM and XD, as set forth in claim 1. Also see applicants arguments filed 5/20/2005, pages 12-14.

Applicant's argument against the 35 U.S.C. 112 second paragraph rejection of claims 1-6 (see pages 11-12, of the amendment filed on 5/20/2005), has been fully considered and is persuasive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hung-Ju et al (US 6,402,558 B1), Postlewaite et al (US 6,015,092 A), Jones et al (US 6,438,638 B1), Camacho (EP 1 291 804 A1) and (DE 296 07 724 U1) all teach memory card readers compatible with a plurality of memory card specifications.
